lwIP for MCUXpresso SDK

Lightweight IP (lwIP) is a small independent implementation of the TCP/IP protocol suite. Source code included in this SDK is based on development version 2.2.0.dev taken from 3rd party lwIP GIT repository. The webpage <https://git.savannah.nongnu.org/cgit/lwip.git> allows to browse the repository and also contains URLs for its cloning. The development versions (X.Y.Z.dev) do not refer to a single source code snapshots. To avoid ambiguity, change log below contains SHA-1 hashes of GIT

commits used when importing the code into the SDK.

- 2.2.0_rev9
 - New features:
 - * Ported lwIP 2.2.0.dev (2023-01-03, branch: master, SHA-1: 3fe8d2fc43a9b69f7ed28c63d44a7744f) to MCUXpresso SDK.
 - * Applied patch to allow sending IPv6 router advertisement. Improved to allow selection of interface and router life time and to allow sending route information options.
 - * src/apps/lwiperf: Support for reverse test (client receives, server sends). Requires iperf version 2.1.0 or newer.
 - Bug fixes:
 - * src/apps/httpsrv: Fixed operation with LWIP_IPV6 enabled. Server can be also accessed using both IPv4 and IPv6 at the same time if compiled with both LWIP_IPV4=1 and LWIP_IPV6=1. Note the type of the field struct httpsrv_param_struct.address has changed from struct sockaddr to struct sockaddr_storage.
- 2.2.0_rev8
 - New features:
 - * src/apps/lwiperf: Added new parameter "buffer_len" to functions lwiperf_start_tcp_client() and lwiperf_start_udp_client() to configure TCP/UDP packet size.
 - * src/apps/lwiperf: Added new parameter "tos" to functions lwiperf_start_tcp_client() to configure TCP packet priority.
 - * NETC adaptation layer: Not forcing the RX/TX buffers placement in non-cacheable memory. Requires the symbol FSL_ETH_ENABLE_CACHE_CONTROL to be defined on project level if the memory region, where the buffers are placed by a linker, has cache enabled.
 - Bug fixes:
 - * src/apps/httpsrv: Added missing includes.
 - * src/apps/lwiperf: Fixed TCP client to send settings at the beginning of each 128 KB block like the PC iperf 2.0.x application does.
 - * src/apps/lwiperf: Fixed validation of TCP received data (with LWIPERF_CHECK_RX_DATA enabled, works with iperf 2.0.x).
 - * src/apps/lwiperf: Fixed lwiperf_list_remove() to clear references to the removed item.
 - src/apps/lwiperf: Program does not assert when buffer cannot be cloned in UDP test, only "can't clone buffer" message is printed.
- 2.2.0_rev7
 - New features:
 - * Ported lwIP 2.2.0.dev (2022-05-09, branch: master, SHA-1: 239918ccc173cb2c2a62f41a40fd893f5) to MCUXpresso SDK.
 - * Added function ethernetif_probe_link() which reads actual link, speed and duplex settings from phy and passes them to driver. Stack could be set to call this function periodically by setting ETH_LINK_POLLING_INTERVAL_MS to value higher than zero.
 - * Added helper functions ethernetif_wait_linkup() and ethernetif_wait_ipv4_valid() to allow blocking of RTOS task or bare metal application until link is up or IPv4 address becomes valid.

- * Added NETC adaptation layer.
- * Processing of rx packets under RTOS moved from ISR to a separate task to improve system reaction times. Switch back to old behavior can be done by setting ETH_DO_RX_IN_SEPARATE_TASK macro to 0.
- Bug fixes:
 - * port: Fixed copying of pbuf contents. Previous code was using an incorrect end condition and could result in the overrun of the destination buffer if more packets were on the queue.
 - * port: Delegating pbuf_free calls to tcpip_thread via pbuf_free_callback where possible (RTOS), ensured pbuf_free is not called from interrupt context when LWIP_ALLOW_MEM_FREE_FROM_OTHER_CONTEXT is not set (bare metal).
 - * port/enet_ethernetif_qos.c - Fixed ENET_RXBD_NUM which was used instead of ENET_TXBD_NUM.
 - * port/enet_ethernetif_qos.c - Fixed buffer alignment to be at least 64.
 - * src/apps/lwiperf: Fixed IPv6 TCP TX throughput lower than IPv4 by modifying maximum segment size to avoid sending two segments instead of one.
 - * src/apps/lwiperf: Out-of-order datagrams in UDP RX server mode are counted to the throughput.
 - * src/apps/httpsrv: Implemented receive timeouts on sockets.
 - * src/apps/httpsrv: Don't assert on HTTP session task creation failure.
 - * src/apps/httpsrv: Fixed build with IPv6 enabled.
 - * src/apps/httpsrv: Updated endianness macros required for websocket SHA generation.
 - * src/apps/httpsrv: Added missing includes.
- 2.2.0_rev6
 - New features:
 - * Ported lwIP 2.2.0.dev (2022-03-25, branch: master, SHA-1: 124dc0a64ef5d7c14a27e3115e5888df to MCUXpresso SDK.
 - * Implemented leaving of multicast groups on ENET and ENET QOS.
- 2.2.0_rev5
 - New features:
 - * Ported lwIP 2.2.0.dev (2021-05-11, branch: master, SHA-1: 7ec4e9be304e7f8953740f10b2c810a2 to MCUXpresso SDK.
 - * LPC ENET adaptation layer allocates more buffers for frame reception now. Previously the number of receive buffers was determined by ENET_RXBD_NUM, which defaults to 5. It is determined by ENET_RXBUFF_NUM now, which is 2 * ENET_RXBD_NUM by default. Increase was needed because the actual version of LPC ENET driver always hold ENET_RXBD_NUM number of buffers and few additional buffers are needed for passing zero-copy frame data to lwIP. If this takes too much memory in your application, you can counteract by decreasing PBUF_POOL_SIZE, since PBUF_POOL is used only for transmission when LPC ENET, Kinetis ENET or ENET QOS is used.
- 2.2.0_rev4
 - New features:
 - * Ported lwIP 2.2.0.dev (2021-03-05, branch: master, SHA-1: 0056522cc974d2be2005c324f37187b5 to KSDK 2.0.0.

- * LWIP_DHCP_DOES_ACD_CHECK option default changed to 0 (disabled):
 - Although the ACD check makes getting IP address from DHCP more robust, it added several seconds delay at startup of all applications which use DHCP.
 - This feature was not present in earlier versions of lwIP.
- * ENET QOS adaptation layer - implemented zero-copy on receive.
- * Kinetis ENET and ENET QOS adaptation layers allocate more buffers for frame reception now. Previously the number of receive buffers was determined by ENET_RXBD_NUM, which defaults to 5. It is determined by ENET_RXBUFF_NUM now, which is 2 * ENET_RXBD_NUM by default. Increase was needed because the actual version of Kinetis ENET and ENET QOS drivers always hold ENET_RXBD_NUM number of buffers and few additional buffers are needed for passing zero-copy frame data to lwIP. If this takes too much memory in your application, you can counteract by decreasing PBUF_POOL_SIZE, since PBUF_POOL is used only for transmission when Kinetis ENET or ENET QOS is used.
- * Removed ethernetif_config_t.non_dma_memory field which was required to configure memory ranges unusable by ENET DMA on LPC devices. The setting has been replaced by BOARD_ENET_NON_DMA_MEMORY_ARRAY macro.
- 2.2.0_rev3
 - New features:
 - * Ported lwIP 2.2.0.dev (2020-07-07, branch: master, SHA-1: c385f31076b27efb8ee37f00cb556878) to KSDK 2.0.0.
- 2.2.0_rev2
 - New features:
 - * Kinetis ENET adaptation layer - implemented zero-copy on receive.
 - * lwiperf - counter of transferred bytes extended from 32 to 64 bit
 - Bug fixes:
 - * Fixed restarting Auto IP from DHCP.
- 2.2.0_rev1
 - New features:
 - * Ported lwIP 2.2.0.dev (2019-12-12, branch: master, SHA-1: 555812dcec38c9a2ef1ef9b318162915) to KSDK 2.0.0.
 - * Implemented LWIP_ASSERT_CORE_LOCKED related functions in sys_arch.c. It can be enabled in lwipopts.h:
 - #define LWIP_ASSERT_CORE_LOCKED() sys_check_core_locking()
 - #define LWIP_MARK_TCPIP_THREAD() sys_mark_tcpip_thread()
// if NO_SYS == 0
 - #define LOCK_TCPIP_CORE() sys_lock_tcpip_core() // if NO_SYS == 0 and LWIP_TCPIP_CORE_LOCKING == 1
 - #define UNLOCK_TCPIP_CORE() sys_unlock_tcpip_core()
// if NO_SYS == 0 and LWIP_TCPIP_CORE_LOCKING == 1
- 2.1.2_rev5
 - New features:
 - * Implemented TCP_USER_TIMEOUT socket option.
 - * Implemented SIOCOUTQ ioctl.

- 2.1.2_rev4
 - New features:
 - * Ported lwIP 2.1.3.dev (2019-02-27, branch: STABLE-2_1_x, SHA-1: 1bb6e7f52de1cd86be0eed31 to KSDK 2.0.0.
 - * Updated sys_thread_new implementation and comment.
 - * Kinetis ENET adaptation layer - reading frames into a pbuf chain is conditionally compiled only when a single pbuf from pool cannot hold maximum frame size (PBUF_POOL_BUFSIZE >= maximum frame size). Avoiding this code also reduces stack size requirements by about 1.5 kilobytes.
 - Bug fixes:
 - * Fixes in ethernetif_linkoutput() in enet_ethernetif_lpc.c:
 - Removed access to possibly freed pbuf.
 - Call pbuf_free() when transmit buffers not available.
 - When copying pbuf chain, updating the number of necessary transmit buffers to wait for, which can be often smaller in the copy.
 - * When CGI script is reading POST data by chunks, the loop in httpsrv_read() may cause blocking in receive function waiting for more data at the end of the stream
 - HTTPSRV_cgi_read() - added limiting of the last chunk length according to content length to avoid undesired blocking
 - * Applied AUTOIP patch <https://savannah.nongnu.org/patch/?9847> - with modification to support multiple network interfaces.
 - * Fixed buffer overflow in httpsrv when application provided CGI script does not handle the whole content of POST request
 - Removed LwipMibCompiler contrib application as it contained LGPL licensed files in Sharp-SnmpLib.
- 2.1.2_rev3
 - New features:
 - * lwiperf updated with UDP client/server support from the patch 9751 (<https://savannah.nongnu.org/patch/?9751>)
- 2.1.2_rev2
 - Bug fixes:
 - * Fixed lwiperf_abort() in lwiperf.c to correctly close connections and free resources
