Hardware Rework Guide for MIMXRT1170-EVK and AW-CM358MA

This section is a brief hardware rework guidance of the EdgeFast Bluetooth PAL on the NXP i.MX MIMXRT1170-EVK board and AW-CM358MA. The User's Guide of AW-CM358MA is available [here](#).

12.1 Hardware rework

- **HCI UART rework**

1. Solder 0 ohm resistor to R1901 and R1902.
2. Remove resistors R795, R796, R797, R798, R799, R800, and R801.

3. Remove 0 ohm resistor from R1816.

Hardware Rework Guide for MIMXRT1170-EVK with Direct Murata M.2 Module

This section is a brief hardware rework guidance of the Edgefast Bluetooth PAL on the NXP i.MX MIMXRT1170-EVK board and the Murata 1XK or 1ZM solution - direct M.2 connection to Embedded Artists' EAR00385 (1XK) or EAR00364 (1ZM) M.2 modules. The rework is necessary to connect the RADIO_ENABLE (or WL_RTS) signal in addition to two UART signals.

The hardware rework consists of two parts:

- HCI UART port rework
- Radio control signal rework (RADIO_ENABLE)

14.1 Hardware rework

1. HCI UART rework:

On MIMXRT1170-EVK board, populate R1901 and R1902 with zero Ohm resistors. This connects the BT_UART_RXD and BT_UART_CTS signals respectively to the M.2 connector.

2. Radio control signal rework (WL_CTS):

On MIMXRT1170-EVK board, populate R404 with a zero Ohm resistor. Remove R183 resistor. This connects the WL_RST signal directly to the M.2 connector. This signal resets both wireless cores.
